

UTV SKID

ASSEMBLED & WET-TESTED IN SIOUX FALLS

THE SLIP-ON.

79.2 gallons, a WATERAX® VERSAX® pump on a genuine Honda GX200 — built onto a TTI poly tank, ready to drop on the back of a UTV and go.

Built and wet-tested in Sioux Falls. Ships ready to run.

BUILT AND BACKED IN SIOUX FALLS

ASSEMBLED, TESTED, AND SERVICED WHERE IT'S SOLD.

01

ASSEMBLED & WET-TESTED

We mount the WATERAX pump and Honda engine to the TTI tank, plumb the pressure-relief bypass, and run water through the unit before it leaves the shop. It arrives primed, proven, and ready to run.

02

WATERAX SERVICE, IN-TERRITORY

Heiman is a WATERAX service-tier dealer — certified pump repair on-site with parts on the shelf. A seal or impeller gets replaced here, fast, so the unit stays in service.

03

ONE POINT OF CONTACT

Buy it online or put it on one PO alongside turnout, pumps, or apparatus. One delivery and one warranty path, from a family-owned shop serving the region since 1947.

BUILT FOR WHO USES IT

FIRE DEPARTMENTS

Initial attack and mop-up on grass and brush. A low center of gravity keeps the UTV stable on grade — first water on a spot fire while the engine responds. Pump and flow configured to your ground.

FARMS & PROPERTY OWNERS

One pump, one tank, three seasons of work: fire protection for the place, watering newly-planted trees through a dry stretch, and washdown for equipment and yards.

STANDARD BUILD - UTV SKID

\$6,999

Order online or request a quote — custom pump, flow, or bottom-fill kit on request.

SPECIFICATIONS & ORDERING

THE BUILD — COMPONENT BY COMPONENT

SIX PARTS. ALL OF THEM SERVICEABLE.

POWERPLANT

Genuine **Honda GX200** — 5.5 net HP, 196cc commercial single-cylinder, recoil start. Parts and service at every small-engine shop in the territory. Not a private-label clone.

PUMP

WATERAX® VERSAX® VS2-6V vehicle-mounted high-pressure pump — up to 105 GPM at a maximum 120 PSI. Field-serviceable; WATERAX-authorized repair on-site with parts stocked.

TANK

TTI OnDeck rotationally-moulded, UV-stabilized polyethylene — 79.2 gal, fully drainable, with a calibrated sight-level tube molded into the side wall. Backed by a 25-year tank warranty.

HOSE REEL

Heavy-duty manual-rewind reel with 100 ft of red Gates Plant Master 300 hose (1.15" O.D., 300 PSI, -40°F to 200°F) and a Lexan® polycarbonate combination fog nozzle, 3/4" GHT — straight stream to fog.

MOUNT & SKID

Galvanized-steel pump & reel plate fixed to the integrated poly skid base, with tie-down points so the unit straps down solid and stays put on grade. Drops into a full-size UTV bed.

PRESSURE-RELIEF BYPASS

Routes excess pressure back to the tank when the nozzle is closed — keeps the pump cool and protected during long stretches idling on scene, for longer pump life on extended standby.

ONE SKID, MORE JOBS THAN JUST FIRE

DIRECT ATTACK

FIRE RESPONSE

Initial attack and mop-up on grass and brush; rapid first water while the engine responds.

TREE WATERING

PROPERTY CARE

Water newly-planted trees and landscaping through a dry stretch, straight from the reel.

WASHDOWN

YARD & EQUIPMENT

Wash down machinery, yards, and gear — same pump, different nozzle, year-round use.

TWO WAYS TO BUY THE SLIP-ON.
